Global Immunofluorescence Assay Market is valued approximately USD 2.45 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6.0% over the forecast period 2022-2028.

Immunofluorescence assay (IFA) is a standard virologic procedure for detecting the presence of antibodies. The antibodies utilized in the assay are labeled with a fluorescence dye and enable them to tie up with its complementary antigen. The technique is used to analyze the presence of specific proteins in the culture, cell, patient's body fluid sample, and others. The rising availability of government funding for life science research, growing awareness regarding the detection of diseases at the initial stage, coupled with the increasing prevalence of chronic diseases like cancer, cardiovascular, and other infectious diseases are the chief factors that may accelerate the market growth across the globe. For instance, as per the American Institute for Cancer Research, in 2018 there were around 18.1 million cancer cases were accounted around the world and it is anticipated to reach about 29.5 million by the end of 2040.

Moreover, as per the World Health Organization (WHO), in 2020, chronic diseases are accounted for nearly 73% of all deaths and 60% of the global burden of diseases. Thereby, rising incidences of chronic diseases such as neurological disorders, cancer, autoimmune diseases, diabetes, lung disorders, and many others are propels the market demand around the world. However, high instrument costs and a dearth of skilled professionals impede the growth of the market over the forecast period of 2022-2028. Also, an increasing number of research activities is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Immunofluorescence Assay Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing research activities, availability of government funding, and presence of chief market players across the region. Whereas, Asia-Pacific is also anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as increasing spending on the R&D activities, as well as, the growing incidence of chronic & infectious diseases, would create lucrative growth prospects for the Immunofluorescence Assay Market across the Asia-Pacific region.
