Abstracts

Global Immunology Market is valued at approximately USD 97.93 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 8.5% over the forecast period 2022-2029. Immunology is the field of medical and biological research that focuses and studies the immune system. The immune system protects individuals from infection in numerous ways. by enhancing or inhibiting the immune system, immunology medications and substances alter the immunological response. Immunology drugs or agents are used to treat or prevent infections as well as several autoimmune and immunological diseases such type 1 diabetes, rheumatoid arthritis, and psoriatic arthritis. The global market growth is primarily driven by the factors such as a surge in demand for biosimilars, growing awareness about immunological diseases, coupled with the increasing demand for preventive care.

In addition, the rise in incidences of autoimmune disorders is a key factor that is stipulating the market demand in the global market. A study by the National Stem Cell Foundation estimates that at least one of 80 or more autoimmune illnesses affects about 4% of people around the world. For instance, various market participants are focusing on creating and introducing new products to the market as a result of the

growing demand for these medications among patients. For instance, Lupin introduced a generic rheumatoid arthritis medication in September 2020. Likewise, As of April 2022, there were approximately 20 pipeline projects from Johnson & Johnson Services, Inc. for a variety of autoimmune indications, including psoriatic arthritis, rheumatoid arthritis, inflammatory bowel disease, and others, and approximately 30 pipeline projects from Sanofi in the immunology segment. Thereby, the increasing prevalence of autoimmune disorders and growing emphasis on introducing its treatments is boosting the market growth. Moreover, the rising introduction of novel therapies, as well as the increasing product approvals by regulatory agencies are presenting various lucrative opportunities over the forecasting years. However, the high cost of treatment and adverse effects associated with the product are hampering the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Immunology Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the availability of advanced healthcare infrastructure, along with growing investment on research and development activities. Whereas, the Asia Pacific is also expected to grow with the highest CAGR during the forecast period, owing to factors such as rising occurrence of autoimmune conditions, surging demand for preventive care, and increasing drug approvals in the regional market space.
