Abstracts

Global Implantable Loop Recorders Market is valued approximately at USD 1.1 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 9.6% over the forecast period 2021-2027. A heart-monitoring device implantable is an implantable loop recorder placed close to the chest which captures the heart's electrical impulses that help record rhythm and thus keep ECG data from the heart for a length of time. It can collect the ECG data for up to three years and helps to give ECG data that cannot be delivered by normal ECG equipment.. The Implantable loop recorder market is driven by the key factors such as growing incidence of cardiac disorder and growing adoption of sedentary lifestyle. For instance, Cardio-vascular disorders (CVDs) are the number 1 worldwide cause of mortality and most may be avoided by the right life-style, according to the World Health Organisation. In 2016, 17,9 million individuals died of CVDs worldwide, representing over 31 percent of the population. As a result of changes in lifestyle and at-risk risk factors such as alcohol drinking, obesity, poor food etc., there is growing incidence of chronic CVD illnesses among people. However, stringent regulatory framework may impede market growth over the forecast period of 2021-2027.

Geographically, North America is dominating the market with revenue shares owing to increased knowledge of the benefits of different cardiac surveillance equipment, high availability and sophisticated healthcare infrastructure. Moreover, in the region. during
