Abstracts

Global In-Circuit Tester Market is valued approximately USD XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027.

An in-circuit tester is a device which is plugged into an electrical socket to make sure it is wired properly. The main work of this tester is to measure all components on PCB. In doing so, defective components are detected and can be replaced accordingly.

Advancement in technology and increment in the consumer electronics manufacturing, including laptops, smartphones and other electronic device is driving the market growth.

In September 2019, Test Research Inc. launched the solution for PCB assembly testing and inspection that includes 3D solder paste inspection (SPI), 3D automated optical inspection (AOI), 3D CT automated x-ray inspection (AXI), high-performance in-circuit testing (ICT) and functional tester (FCT). In May 2019, Teradyne Inc. signed an agreement with Silan Microelectronics to make sure thorough testing of automotive and high-power electronics. The team effort will allow customers to build on one test platform as product usage change while supporting both industry-leading quality of test and throughput.

Lack of standardization in connectivity protocol and high cost related to variation

process can be a hindering factor for the market. However, the rising adaption of high-density interconnect technology and increasing penetration of cloud compounding and internet of things (IoT) results in the growth of market in forthcoming period.

The regional analysis of Global In-Circuit Tester Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific has a dominating place in the global in-circuit test market during the forecast period. The Asia Pacific has a dominating market of consumer electronics due to a large number of household appliances and smartphone users. High population and increasing income in economies such as India, South Korea, Japan and China has a rising number of consumers in electronics usage which acts as a critical factor responsible for the growth of the in-circuit test market.
