Abstracts

Global In-Game Advertising Market is valued approximately USD 5.29 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 19.5 % over the forecast period 2021-2027. In-game ads uses typical IAB creatives to run advertising components in a real-time advertising campaign within video games, equivalent to any other digital medium. Marketers may get their name or brands advertised in interactive games by in-game advertisements. Increasing demand for social and mobile gaming, increasing internet penetration, growing reach and return on investments and easy configuration of advertisements in social gaming are expected to drive the market growth. Also, these advertisements are non-intrusive and enable players to have a more enjoyable experience and this service may also generate added revenues for game developers which has led the adoption of In-Game Advertising across the forecast period. According to the article published by Frontiers in Psychology in 2019, time spent playing video games has gradually increased, from 5.1 hours a week in 2011 to 6.5 hours per week in 2017. As per the journal released by Website Setup, in 2019, there are 7.83 billion people around the world, with 4.66 billion actively using the Internet. However, producers' platforms for engagement and in-game dynamics are often pirated, Over-interrupting and unrelated advertisements, the stretched development process and scalability with a short lifecycle is likely to stifle demand growth of the market over the forecast period of 2021-2027. Also, value exchange model and audio-visual influence on viewers which creates long lasting impact are likely to increase the adoption & demand for In-Game advertising market during the forecast period.

The key regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are considered in the geographical study of the global In-Game Advertising industry. North America is the dominating region across the world in terms of market share due to early technological adoption and the presence of cutting-edge gaming infrastructure. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as adoption of games and high internet penetration would create lucrative growth prospects for the In-Game Advertising market across Asia-Pacific region.
