Abstracts

Global Indoor Air Quality (IAQ) Monitoring Solution Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Indoor Air Quality (IAQ) is the term used to describe the air quality inside and around buildings and other structures, particularly about the health and comfort of building residents. Solutions for IAQ monitoring include sensors, platforms for monitoring, systems, and others. These systems help in protecting health by upholding clean indoor air quality and maintaining the people and environment from unsafe air pollution. The growing public awareness pertaining to healthcare and environmental implications of air pollution, coupled with the increasingly supportive government regulations for effective air pollution monitoring and control are the key driving factors for the market growth.

The growing trend of smart homes or ambient assisted living is a key factor that is directly associated with the market demand in the global market. According to Statista, there were around 259.89 million smart homes recorded worldwide, which is projected to reach 478.22 million smart homes by the year 2025. Therefore, the rising adoption of smart home constructions and surging demand for modern technological advancements to monitor fresh indoor air quality is accelerating the market growth at a substantial rate. Moreover, the growth of the industrial sector, as well as the rising technological advancements in the field of air pollution monitoring are presenting various lucrative opportunities over the forecasting years. However, the high production cost of smart IAQ monitoring systems and technical limitations pertaining to air quality monitoring

products are hindering market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Indoor Air Quality (IAQ) Monitoring Solution Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Europe dominated the market in terms of revenue, owing to the high penetration of new advanced indoor air quality monitoring technologies, along with the growth of the industrial sector. Whereas, the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as the growing public-private funding and investments to encourage indoor and outdoor air pollution monitoring, as well as the rising number of green building initiatives in the market space.
