Abstracts

Global Industrial computed tomography Market is valued approximately at USD 298 Million in 2020 and is anticipated to grow with a healthy growth rate of more than 8.59% over the forecast period 2021-2027. Industrial CT scanners have enormous advantages, such as obtaining the internal structure of an object, validating extremely accurate internal dimensions, allowing comparison to reference models, no shaded zones, compatibility with all shapes and sizes, no post-processing work and extremely high-resolution imaging. The Industrial computed tomography market is being driven by growing need for early diagnosis, increasing preference for minimally invasive diagnostic procedures, rising global prevalence of targeted diseases coupled with an aging population, increasing benefits of CT scans over other imaging modalities, and technological advancements. In addition, the rising demands from industrial sector is also estimated to surge the market. For instance, in south Korea the government is offering an amount of around USD 16.8 million to cover relocation and facility costs for firms relocating to regions outside the capital. This is estimated to boost the demand for

industrial testing and detection therefore driving the market for computed tomography. However, significant cost of installation and high cost for maintenance, may impede market growth over the forecast period of 2021-2027.

The regional analysis of the Industrial computed tomography Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific is a significant region across the world in terms of market share due to growing due to increasing numbers of target diseases, rising patient awareness on the benefits of CT scanning in the region. Whereas North America is also anticipated to exhibit the highest CAGR over the forecast period 2021-2027, due ongoing expansion and modernization of healthcare infrastructure in the region.
