Abstracts

Global Influenza Vaccine Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Influenza vaccinations contain three types of influenza viruses: influenza type A with H3N2 virus strain, influenza type A with H1N1 virus strain, and influenza type B virus strain. During the forecasted period, an increase in the occurrence of influenza epidemics and seasonal outbreaks is predicted to boost product sales. One of the key reasons driving market expansion is an increase in government support and monitoring of influenza vaccination on a national and worldwide level to monitor the availability, distribution, and administration of flu vaccines. Furthermore, rising government funding and increased investment by key market participants have permitted the launch of therapeutically effective vaccines, propelling the influenza vaccine market forward. The creation of a novel vaccine is a lengthy procedure that takes roughly 10-15 years to complete and test for safety and efficacy. Regulatory restrictions for clinical trials differ by country, potentially delaying the development of vaccines and limiting market expansion. Many firms are assisting with distribution, including Sanofi, Emergent BioSolutions Inc., and F. Hoffmann-La Roche Ltd. On the other side, due to rigorous requirements during clinical studies that extend vaccine delivery timetables, several nations are experiencing shortages and delays in vaccine approvals and availability. However, high cost associated in development of vaccines may impede market growth over the forecast period of 2021-2027.

The regional analysis of the Global Influenza Vaccine Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). North America is the leading region across the world in terms of market share due to increased prevalence of influenza in the region. Whereas Middle East and Africa (ROW) is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to increase in awareness program, improvement in healthcare facilities, available disposable income, and rapid development of economic conditions across the region.
