Abstracts

Global Inhaled Nitric Oxide Market was valued at USD XX million in 2019 and expected to grow with a CAGR 8.1% over the forecasting period 2020-2027. Inhaled Nitric Oxide (INO) is a gas which inhaled through mouth. It is used together with ventilator machine and other machines which work in muscles smoothening to widen the blood vessels in the lungs. INO is identified as an intoxicating and selective pulmonary vasodilator that does not decrease systemic vascular tone. Increase in chronic diseases, accelerates the demand of INO in healthcare sector thus, driving the market growth of the global Inhaled Nitric Oxide market. Moreover, ncreasing number of patients with chronic obstructive pulmonary disease and increasing occurrence of diseases in the new-born babies such as neonatal hypoxic respiratory failure (HRF) and persistent pulmonary hypertension also enhanced the market growth. For Instance, as per JHEOR 2019 report ((Journal of Health Economics and Outcomes Research), the annual number of term and late pre-term new-borns with HRF is projected at 80000 in the United State alone. Despite that, strict application norms and High cost of treatment are hindering the growth of market over the forecasting period 2020-2027.

The regional analysis of the Inhaled Nitric Oxide Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. In which, North America is dominating region. Growing respiratory disease and asthma incidence was highest among workers in the healthcare and social assistance industry. However, APAC is emerged as fastest growing region over the forecasting

period 2020-2027 due to highest live birth per 1000 people and increasing respiratory diseases.
