Abstracts

Global Injectable Drug Delivery Market is valued at approximately USD 624.5 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 11.50 % over the forecast period 2022-2028. Injectable Drug Delivery is drug delivery system that can be used instead of oral route of administration and is more effective due to its speed of action. Injectable medications are injected directly into the bloodstream using a syringe. As injectable drug delivery provides a vast surface area for absorption, it produces rapid systemic levels of absorption. Rise in demand for self-injectable devices, expanding biologics market and rising prevalence of chronic diseases have driven the adoption of Injectable Drug Delivery across the projected period. For Instance:Chronic diseases afflicted a major share of the Chinese population in 2020. More over 500 million people were overweight or obese, and more than 400 million people suffered from excessive blood pressure. Chronic diseases accounted for 88.5 percent of all fatalities in China in 2019. Also, rising technological advancements, rise in demand for Biosimilar and generic injectable and expanding manufacturing facilities are most likely to boost the overall growth of the Injectable Drug Delivery market. However, presence of alternative routes of administration, risk of infections with needlestick injuries and product recalls can obstruct the market's expansion over the projection period of 2021-2027.

The key regions considered for the global Injectable Drug Delivery market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North

America is the leading region across the world. Rising prevalence of chronic diseases and growing biologics market are driving the market growth in North America. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027.
