Abstracts

Global Ink Resin Market is valued approximately USD 3.4 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 4.7% over the forecast period 2019-2026. Ink resins are used in the manufacturing of printing inks. These inks are utilized in dispersions and pigments of the inks for changing the property of end use products. These ink resins are raw material that expose substantial physical characteristics to printing inks. These characteristics include viscosity, gloss, increase in pigment drenching, and strong pigment adhesion. The packaging industry is the foremost customer of printing inks and ink resins are utilized in the production of all types of printing inks. Thus, increasing need for printing inks in the packaging industry is anticipated to propel the global ink resins market during the forecast period. Apart from this, environmental protection legislations and new ink resin technologies are also contributing towards market growth. Furthermore, collaboration between printing ink manufacturers and ink resin manufacturers is expected to create significant growth opportunity in the market over the forecast period. However, price rise of ink resin feedstock impedes the growth of the market over the forecast period of 2019-2026.

The regional analysis of global Ink Resin market is considered for the key regions such

as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is expected to witness steady growth owing to the growing food & beverage industry. Whereas, Asia-Pacific is anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026. Factors such as increasing demand for printing inks in the packaging industry, growing trend of online shopping and packaged food items would create lucrative growth prospects for the Ink Resin market across Asia-Pacific region.
