Abstracts

Global Inorganic Color Pigments Market is valued approximately at USD 3.19 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 3% over the forecast period 2021-2027. Inorganic color pigments are non-migratory, non-warping and do not bleed. They are used in various industries such as industrial coating, coil coating, powder coating and others. Also, they are used in the coloring of plastics, construction and others. Rising demand of plastic in packaging, automotive and building & construction coupled with the growth of these end-use industries is fueling the demand for inorganic color pigments in the market. For instance, according to Statista, global automotive industry revenue in 2017 was USD 5315 billion which is estimated to reach USD 8931 billion in 2030. Furthermore, government housing projects and growing demand for better aesthetics are expected to lead the market towards further growth during forecast period. For instance, according to India Brand Equity Foundation, government of India is planning to construct 20 million affordable houses across urban areas by 2022, under Pradhan Mantri Awas Yojana. However, adverse effects of inorganic color pigments on environment and stringent government regulations may hamper the market growth in coming years.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key regions considered for regional analysis, among which Asia Pacific is a significant region across the world in terms of market share and is also expected to grow with the highest growth rate during forecast period. Factors attributed to Asia Pacific's growth include less stringent government laws as compared to North America and Europe and

easy availability of raw material and low labor cost in the countries such as China and India, which is attracting investors to set up their manufacturing facilities in the region.
