Global Internet of Everything (IoE) Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The Internet of Everything (IoE) refers to the networked connection of people, process, data, and things. In Internet of Everything (IoE) concept billions of objects work on sensors to detect measure and assess their status, and all are connected over public or private networks using standard and proprietary protocols. The rising automation across different industries and increasing demand for cloud based IoT solutions as well as recent product innovations from leading market players are factors that are accelerating the global market demand. For instance, according to Statista – in 2021, the global industrial automation market amounted to USD 175 billion. The market is forecast to grow at a compound annual growth rate (CAGR) of around 9% until between 20201 & 2025 to reach to USD 265 billion by 2025. Furthermore, leading market players are working towards product innovations to leverage the growing adoption of Internet of Everything solutions. For instance, in March 2021, US based Oracle released upgradations to its existing Oracle Fusion Cloud Supply Chain and Manufacturing platform. The company included IoT Production Monitoring Capabilities and IoT Asset Monitoring features to enable customers to monitor the key characteristics of their assets. Also, rising government investment towards smart city projects and increasing penetration of IoE solutions in healthcare sector are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, a high deployment & maintenance cost associated with IoE Solutions impede the growth of the market over the forecast period of 2022-2028.
