Abstracts

Global Intracranial Hemorrhage Diagnosis & Treatment Market is valued approximately USD 1.4 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 5.98 % over the forecast period 2020-2027. Intracranial hemorrhage is caused due to the buildup of blood within the skull, that can increase in intracranial pressure. This pressure can damage brain tissues. Intracerebral hemorrhage (ICH) is also called cerebral bleed, that occurs in the brain or in the ventricles. It can also be caused by a skull fracture during childhood or adolescence or due to trauma or medical conditions such as cancer, tumour etc. The commonly used diagnostic tests for brain hemorrhage are MRI, cerebrospinal fluid exam, computed tomography angiography (CTA), angiogram, lumbar puncture, and X-rays. The rise in incidence of traumatic brain injuries and increase in R&D spending are the major factors expected to drive the global Intracranial Hemorrhage Diagnosis & Treatment market. For instance: as per Statista, the expenditure on research and development by United States pharma companies was USD 79.6 billion in 2018 and has risen to USD 83 billion of expenditure by pharma member companies on R&D in 2019. Similarly, the global spending on pharmaceutical research and development was USD 181 billion in 2018 and is projected to rise to USD 227 billion spending on pharmaceutical research and development in 2025. However, the complications associated with the treatment is the major factor restraining the growth of the global Intracranial Hemorrhage Diagnosis & Treatment market during the forecast period.

The regional analysis of global Intracranial Hemorrhage Diagnosis & Treatment market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World.
