Abstracts

Global Intraoral Cameras Market is valued approximately at USD 1.6 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 10.9% over the forecast period 2021-2027. Intraoral camera is a small camera that takes an X-ray of the tooth or gums of patients. It is useful in diagnosing dental conditions such as tooth decay and cracked teeth. Rising prevalence of oral diseases, growing awareness regarding oral health, and new product launches are fueling the growth in the market. For instance, in March 2021, Dentsply Sirona launched Primescan intraoral scanner, designed of autoclavable stainless steel sleeve with disposable window. This device is developed to assist in creating precise digital impressions. Furthermore, favorable government initiative and introduction of lightweight devices are expected to boost the demand for intraoral cameras market. However, shortage of dental radiologists may hamper the growth during forecast period.

Among Asia Pacific, North America, Europe, Latin America, and Rest of the World, North America is the dominating region across the world in terms of market share due to high prevalence of diseases such as gingivitis, caries and periodontics coupled with rising number of dental clinics in the developed regions. Whereas Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to rising demand for oral hygiene and growing dental and medical tourism.
