Abstracts

Global Intraoral Scanner Market is valued at approximately USD 415.8 million in 2021 and is anticipated to grow with a healthy growth rate of more than 8.7% over the forecast period 2022-2028. Intraoral scanners are computerized tools that take 3-dimensional pictures inside of the mouth. The technology uses high-resolution pictures to show the soft tissues within the mouth in detail. With the creation of virtual replicas of the intraoral region, intraoral scanners produce videos or take pictures. The market growth is driven by key factors such as rise in Dental Disorder and increase in Geriatric Population. For instance, the World Health Organization estimates that over 530 million children suffered tooth decay in their primary teeth, which affected approximately 3.5 billion people worldwide. Furthermore, data on oral health from the World Health Organization (WHO) from 2020 indicate that an estimated 3.5 billion people worldwide suffer from oral diseases. In their primary teeth, more than 530 million children worldwide suffer from dental caries (milk teeth). Additionally, 9% of adults have severe gum disease, according to statistics from the Centers for Disease Control and Prevention (CDC) from December 2020. Around half (46%) of all people aged 30 or older have gum disease overall. according to the October 2020 Borgen Project. Additionally, 85% to 90% of adults and 60% to 80% of children have dental tooth decay,. Moreover, rise in development of scanners is the main opportunities to propel the market growth. However, high cost of intraoral scanners and lack of skilled professionals impede the growth of the market over the forecast period of 2022-2028.
