## **Abstracts**

The global Intrauterine Contraceptive Devices (IUD) Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2029. Intrauterine Contraceptive Devices (IUD) are small T-shaped copper or plastic devices that are put into uterus (womb) by a nurse or a doctor. It protects against pregnancy for around 5-10 years. It is also referring as copper coil or coil. The Intrauterine Contraceptive Devices (IUD) market is expanding because of factors such as the rising technological initiatives towards effective contraception and increasing rate of unintended pregnancies.

According to World Health Organization (WHO) in 2019, adolescent aged 15-19 years across various middle and low income countries had around 21 million pregnancies every year. Among these about 50% were unintended and resulted in estimated 12 million births Whereas rising government and private firms initiatives towards unwanted pregnancies & growing awareness towards unwanted abortions create lucrative opportunities for the market. However, risk of causing pelvic inflammatory hampers the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Intrauterine Contraceptive Devices (IUD) Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the

increasing adoption by women towards effective forms of reversible contraception, and growing interest by healthcare providers. Whereas North America is expected to grow significantly during the forecast period, owing to factors such as the presence of better healthcare infrastructure and growing awareness among population.
