Abstracts

Global Iodophors Market is valued at approximately USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2023-2030. Iodophors is a chemical formulation blending iodine with surfactants, that serve as potent disinfectants and antiseptics. With a rising emphasis on hygiene across diverse sectors, the global iodophor market is poised for substantial growth in the foreseeable future. The market growth is driven by key factors such as growing consumer awareness and application of hygienic practices, and increased demand for eco-friendly products. The food and beverage processing sector is experiencing increased demand for iodophors, driven by the imperative for safe and pristine food production. Renowned for their efficacy against a spectrum of microorganisms, including bacteria, viruses, and fungi, iodophors emerge as indispensable assets for ensuring thorough disinfection and sanitation within food processing facilities. As per Statista, In July 2022, a survey delved into the frequency with which adults in Great Britain consulted food hygiene ratings before dining out. The findings revealed that the majority, constituting 33 percent, admitted to infrequent checking of hygiene ratings. Conversely, 19 percent reported being diligent in checking, while 14 percent confessed to never verifying restaurant hygiene ratings. However, regulatory restrictions on certain iodine-based formulations stifle market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Iodophors Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is

leading the market share of the Iodophor market and is expected to be the fastest-growing region in the forecast years owing to growing medical tourism and the importance of food safety are factors that may drive demand for iodophor disinfectants in the region.
