Global IoT Connectivity Management Platform Market is valued at approximately USDXX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. An IoT connectivity management platform is used to connect and streamline the management of IoT devices like M2M (machine-to-machine) SIM cards. This platform enables the modification of the M2M deployments and cellular IoT. The growing adoption of IoT in the automotive sector, the rising trend of Bring-your-own-device (BYOD), coupled with the increasing investment in IoT development by various enterprises are the primary factors surging the market demand across the globe. For instance, according to Statista, the revenue of (Internet of Things) IoT in the automotive segment is estimated to be recorded at USD 5 billion in 2014 and the amount is projected to constantly grow and likely to reach around 23.6 billion by the year 2025. Thereby, the rising proliferation of IoT in the automotive sector is expected to fuel the demand for IoT connectivity management platforms, which, in turn, accelerates market growth in the approaching years. However, a dearth of skilled professionals and rising concern for data security and loss impede the growth of the market over the forecast period of 2022-2028. Also, the rising acceptance of cloud computing and growing adoption of connected devices are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global IoT Connectivity Management Platform Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market

share owing to the rising expenditure on high acceptance of emerging technologies, the growing expenditure on IoT infrastructure development.
