## **Abstracts**

Global ISO Container Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. International Organization for Standardization (ISO) containers are multimodal international containers made to their specifications (ISO). The design of ISO containers considers all from size to the type of steel used in construction to the permitted gross weight. They are made for usage on ships, trains, and trucks. The fundamental goal of an ISO container is to guarantee that it can survive harsh conditions and maintain its structural integrity while being transported by land, rail, or water. Additionally, the ISO regulation guarantees that the containers are of the proper size and strength for safe and even stacking on transportation systems. The surge in demand for highly efficient and superior capacity containers, growing application of remote container management solutions, and rising trade agreements are some prominent factors that are driving the market growth around the world.

The growth of the container shipping industry due to rising containerization and globalization is directly associated with the demand of ISO container in the global market. According to Statista, in 2021, the global shipping container market was estimated to be worth around USD 7.18 billion, which is projected to grow and is likely to reach nearly USD 15.87 by the year 2028. Therefore, these aforementioned factors

are exhibiting a positive influence on market growth. Moreover, the rising inclination towards high cube containers, as well as the increasing use of IoT-based solutions in ISO containers are presenting various lucrative opportunities over the forecasting years. However, the presence of stringent government regulations and high initial investment requirements are challenging the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global ISO Container Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. The Asia Pacific dominated the market in terms of revenue, owing to the high demand for shipping containers, along with the rapid construction of warehouses and distribution centers in the region. Whereas, Europe is expected to grow with the highest CAGR during the forecast period, owing to factors such as growing industrial capabilities, as well as increasing investments to expand its ports and shipping capacity in the market space.
