Abstracts

Global Isoflavones Market is valued approximately at USD 1.3 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.7% over the forecast period 2021-2027. Isoflavones are a class of phytoestrogen-like chemical molecules linked to flavonoids. Soybeans, red clover, chickpeas, green peas, and alfalfa are popular sources. It is used in the production of cosmetics and skin care products including moisturizers and face creams. Isoflavones also have important uses in the pharmaceutical industry, where they are widely utilized to treat a variety of diseases. The market is driven by rapidly increasing geriatric population and prevalence of menopausal issues. Supplement producers have turned to natural alternatives in response to shifting women's tastes. They have switched to soy isoflavones instead of estrogen since they mirror estrogen's properties and give estrogen effects that help with menopausal symptoms including hot flashes and tiredness. In 2019, around 16.5 percent of the American population was 65 years old or above; a ratio which is anticipated to reach 22 percent by 2050. This is a significant increase from 1950, when only eight percent of the population aged 65 or over. . Furthermore, the use of nanotechnology for API synthesis is one of the most recent advances in medication research. The advent of nanoparticle technology for effective API delivery looks promising as a unique and efficient approach. However, stringent regulatory requirements, may impede market growth over the forecast period of 2021-2027.

Geographically, the isoflavones market was dominated by the North American region. Obesity is on the rising in North America, which is driving demand for isoflavones by focusing on weight control strategies and drawing customers to healthy and natural food
