Global Isoleucine Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The Isoleucine can be defined as an essential amino acid. It is largely found in meat, fish, poultry, eggs, cheese, lentils, nuts, and seeds. In the human body Isoleucine is concentrated in the muscle tissues plays important role in the detoxification of nitrogenous waste such as ammonia, which is then excreted from the body by the kidneys. It is also essential for formation and production of hemoglobin and red blood cells. The growing consumption of dietary supplements and increasing end use applications of isoleucine as well as surging number of health consciousness individuals are factors that are accelerating the global market demand. For instance, according to Statista – in 2021, the global market for dietary supplements was valued at USD 205 billion, and this amount is projected to reach to USD 308 billion by end of 2028. Furthermore, as per Council for Responsible Nutrition (CRN), USA – as per the CRN Consumer Survey on Dietary Supplements conducted in 2019, the consumption of

dietary supplements reached to all time high with around 77 percent of Americans reported to consume dietary supplements. Among all age groups, adults between aged between 35 – 54 have the highest usage of dietary supplements at around 81 percent. Also, growing demand for cosmetic and personal care products and rising healthcare spending in emerging markets are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, a high extraction cost associated with Isoleucine impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Isoleucine Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing consumption of dietary supplements and presence of leading market players in the region. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as the thriving growth of pharmaceuticals industry and rising demand for health & wellness products in the region, would create lucrative growth prospects for the global Isoleucine Market across the Asia Pacific region.
