Abstracts

Global Kaempferol Market is valued approximately USD 3.76 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 3.9 % over the forecast period 2022-2028.

Kaempferol is a flavonoid that is derived from plants or food. It is a natural flavonoid with a low water solubility. It is a yellow solid crystalline flavonoid that is soluble in DMSO, hot ethanol, and ethers. It has a high melting point that ranges from 276 to 278 degrees celsius. The substance is frequently employed as a crucial element in the manufacture of medicinal medications. The producers are heavily focused on R&D operations for the creation of natural product alternatives. This, in turn, is projected to have a beneficial impact on market growth in the following years. It may be found in a variety of natural sources, including citrus fruits, grapes, apples, onions, and red wine. Among the plants that contain kaempferol are aloe vera, cuscuta chinensis, glycine max, and moringa oleifera. It contributes to the reduction of oxidative damage to our DNA, cells, and lipids. It has a variety of pharmacological actions, including antibacterial, anticancer, and antidiabetic effects. As a result, the growing number of cancer cases supports market growth. According to 2020 Globocan projections, around 10.0 million cancer-related fatalities and approximately 19.3 million new cancer cases were identified globally. Breast cancer is the most frequent kind of cancer, accounting for around 11.7 percent of all cancers, followed by lung cancer (11.4 percent), colorectal cancer (10.0 percent), prostate cancer (7.3 percent), and stomach cancer (5.6 percent). However, side effects associated with consumption impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Kaempferol Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America has risen to the top of the market. This is due to growing knowledge of the higher prevalence of patients with lung, ovarian, and breast cancer. Kaempferol-containing medications are less hazardous than typical chemotherapy treatments. This, in turn, drives market demand throughout the area. Asia Pacific gained a significant revenue share and is expected to expand at the quickest CAGR. The Asia Pacific region's market is predicted to develop due to a variety of factors such as increased demand for nutritious and nutritional snacks, rising health concerns among middle-aged people, changing lifestyles, and rising consumer disposable income.
