Abstracts

Global Laboratory Centrifuges Market is valued approximately USD 1.8 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.0% over the forecast period 2022-2028. A centrifuge is a laboratory apparatus used to separate fluids, either gas or liquid, depending on density. Separation is accomplished by rapidly rotating a vessel holding material; centrifugal force forces heavier elements to the exterior of the vessel. Laboratory centrifuge innovation focuses on improving convenience, speed, compactness, safety, efficiency, and accuracy. Centrifuge rotors were previously manufactured of tensile steel before being replaced with aluminium and titanium alloys. Carbon fibre rotors are also far lighter than their aluminium equivalents, weighing only 8 kg as opposed to 21 kg previously. Carbon fibre enhances rotor flexibility and resistance to chemical corrosion and structural fatigue. Carbon fibre is used in the FIBERLite Fixed-Angle Rotor by Beckman Coulter (bought by Danaher) and Thermo Scientific Fiberlite rotors. Furthermore, the development of high-speed

centrifuges has significantly shortened the time necessary for centrifugation, lowering the risk of dangers occurring during the process. Design advancements have made changing and maintaining important equipment elements, like as rotors, easier. Certain prominent competitors in the laboratory centrifuges market have released centrifuges with upgraded rotors and other features in recent years. For example, in 2021, Eppendorf AG (Germany) will release the Multipurpose Centrifuge 5910 Ri, which has new technologies to improve and simplify centrifugation. KUBOTA Corporation (Japan) will release the Benchtop Centrifuge S500T and Floor-Standing Refrigerated Centrifuge S500FR in 2021. However, high equipment costs impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Laboratory Centrifuges Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America commanded the largest share of the laboratory centrifuges market. The substantial proportion of North America can be ascribed to rising government R&D spending, increased emphasis on better infectious disease management and treatment, and rapid expansion in the pharmaceutical business. Furthermore, Asia Pacific is expected to have the greatest CAGR during the predicted period.
