Global Laboratory Filtration Market is valued approximately USD 3.34 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.80 % over the forecast period 2021-2027. Laboratory filtration is a mechanical or physical operational process, in which one substance is separated from other. It is usually used to separate liquids from solids. The Laboratory Filtration Market is driven by factors like rising research and development investments in pharmaceuticals and biotechnology industries. According to India Brand Equity Foundation (IBEF), the government of India concentrate on increasing the healthcare expenditure to 3% of Gross Domestic Product by 2022. In addition, growing demand for membrane filtration technology and rising usage of filtration in clinical laboratories will also aid in propelling the market growth. For instance, Sartorius Stedim Biotech and Novasep, joint their forces together in March 2019, in order to develop novel systems for membrane chromatography. However, high costs of system impede the growth of the market over the forecast period of 2021-2027. Also, with the advancements in nanofiber technology, the demand for Laboratory Filtration is likely to increase the market growth during the forecast period.

The regional analysis of global Laboratory Filtration market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is a significant region across the world in terms of market share owing to the presence of established healthcare industry. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as growing pharmaceutical industry would create lucrative growth prospects for the Laboratory Filtration market across Asia-Pacific region.
