## **Abstracts**

Global Lactase Market is valued approximately USD 203.8 million in 2019 and is anticipated to grow with a healthy growth rate of more than 6.5 % over the forecast period 2020-2027. Lactase is used in the dairy production and has the properties to reduce the lactose content in the products while sweetening the product and reduced viscosity. Lactase supplements are prescribed for indigestion problems as well like Irritable bowel syndrome, bloating, gasses etc. The global Lactase market is facing challenges due to the coronavirus pandemic as manufacturing operations and supply chain of many organizations are temporary shutdown. However, the rising cases of lactose intolerance and growing demand from lactose-free dairy product manufacturers and increasing innovations and new product developments in the application drives the demand for lactase enzyme are the few factors responsible for growth of the market over the forecast period. Furthermore, the rising advancements and other strategic alliance by market key players will create a lucrative demand for this market. For instance: on 26th March, 2020, Novozymes launched a new lactase enzyme named Saphera Fibre for dairy products. The new lactase enzyme will help to increase the content of fibre and reducing the sugar from fermented and non-fermented dairy products. Whereas, shifting preferences toward dairy-free alternatives is the major factor restraining the growth of global Lactase market during the forecast period.

The regional analysis of global Lactase market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world owing to the increasing

awareness about lactose intolerance among consumers and expansion of companies providing lactose-free products in the region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
