## Abstracts

Global Lactose-free Infant Formula Market is valued at approximately USD xx billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7.8% over the forecast period 2022-2029. Lactose-free Infant Formula is a baby food meant for infants which is usually made from milk that has been restrained to remove lactose and replace it with another form of sugar or plant-based product. The Lactose-free Infant Formula market is expanding because of factors such as the growing population of lactose-intolerant newborns. This market is dominated by Nestle SA, Abbott Laboratories Co., Danone SA, and Reckitt Benckiser Group plc.

The growing population of lactose-intolerant infants has encouraged plant-based infant formula. Infants who are lactose intolerant may not be able to fully digest the lactose in milk, which can lead to health problems such as bloating, stomach rumbling, cramps, gas, and diarrhoea. A study by the American College of Gastroenterology concluded that 85% of adult African Americans in the United States. People are becoming more lactose intolerant and inheriting the gene that causes this problem inability to digest the lactose content. Intolerance can be inherited by birth due to the gene of the either parent. It can be due to both parents are lactose tolerant. For this reason babies require special formulas containing different types of digestible sugars, such as sucrose (found in table sugar). As well as According to an article published by The Times of India, an Indian daily newspaper and digital news media, as of May 2020, 60% of Indians suffer from dairy intolerance which is expected to propel the growth of this market. Therefore, the increasing incidence of lactose intolerance in young children is driving the lactose-

free infant formula market. In addition, the growing need for a substitute of this product may create further opportunity for this market in the forthcoming year. However, the problem in digestion and formula contamination causing health problem stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Lactose-free Infant Formula Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Europe dominated the market in terms of revenue, owing to the dominance of branded products and the region's increasing lactose intolerant people. North America is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising in lactose intolerant infants and the active support of government and nonprofit organizations in the market space to promote lactose-free infant formula. For instance, according to the National Library of Medicine in the United States, about 65.0% of the population is lactose intolerant. The condition is most common in Finland, where it affects one of the newborns in an estimated 60,000 people, and that number is increasing at a substantial rate.
