Abstracts

Global Leavening Agents Market is valued at approximately USD 6 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 3.5% over the forecast period 2022-2028. In the baking ingredients industry, a leavening agent is one of the most important ingredients. A leavening agent is a substance that causes mixtures to release gases, which is used to leaven dough and batters. As a result, it assists in the creation of absorbent baked goods. One of the major factors driving the growth of the leavening agents market is an increase in global health consciousness. The growing demand for higher-quality, longer-lasting foods, as well as a wide range of functional benefits associated with their inclusion in foods, is propelling the market forward. In the forecast period, issues with leavening agent ratios in order to produce enough carbon dioxide in foods are expected to pose a challenge to the leavening agents market. However, because Asia Pacific, the Middle East, and Africa are fast-growing regions, there is numerous potential for market development of leavening agents. Companies in the food and beverage industry have been conducting substantial research and development to develop new leavening agent products. For instance, AB Mauri and Bockler have partnered to create fermented products and bread components. This brand new agreement sparked the rise of this product category in Ireland, the United Kingdom, and other countries. Similarly, Cargill teamed up with DSM, then known as Avansya, to produce zero-calorie sweeteners using fermentation. They will use fermentation to

generate sweet-tasting compounds that comprise steviol glycosides Reb D and Reb M.

The key regions considered for the global Leavening Agents market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Due to strong demand in the United Kingdom and Germany, Europe contributed the most to the market in 2021. In addition, the growing purchasing power of customers in this region for bakery products will propel the industry forward. According to a poll conducted by the International Baking Industry Exposition, Europe has the highest consumption of bakery products. Bakery consumption in Europe surpassed USD 165 billion in 2016. As a result, the demand for leavening agents is expanding in this region. Whereas, Asia Pacific is expected to grow at the fastest rate in the near future. This can be attributed to the region's rising demand for leavening agents. The rise of the market is being fueled by an increase in disposable income in nations like China and India. Furthermore, rising demand for bakery items due to the high population is driving market expansion throughout the predicted period. The demand for leavening agents is increasing due to lifestyle changes and increasing health awareness.
