Abstracts

Global Lewy Body Dementia Treatment Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Lewy Body Dementia Treatment is a disorder in which abnormal sediments called alpha-synuclein are found in the brain. The increasing prevalence of Parkinson's disease has led the adoption of Lewy Body Dementia Treatment across the forecast period. For Instance: as per the Parkinson's Foundation, in 2020 there were one million people in the U.S. who are living with Parkinson's disease (PD) and 60,000 numbers of Americans are diagnosed with PD each year. And this number is expected to increase and will reach around 1.2 million by 2030. Also, with the increasing awareness about the treatment for LBD, the adoption & demand for Lewy Body Dementia Treatment is likely to increase the market growth during the forecast period. However, lack of expertise in the treatment impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Lewy Body Dementia Treatment market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World.

North America is the significant region across the world in terms of market share owing to the rise in patient population suffering with lewy body dementia, Parkinson's disease, the rise in geriatric population, increased awareness among the population base, and affordability of oral medications. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2022-2028. Factors such as rising research and developments for the treatment of lewy body dementia, untreated neurological conditions, and untapped opportunities in emerging markets would create lucrative growth prospects for the Lewy Body Dementia Treatment market across Asia-Pacific region.
