Abstracts

Global Lighting as a Service Market is valued at approximately USD 0.69 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 33.1 % over the forecast period 2022-2029. Lighting as a Service, an all-inclusive subscription-based pricing approach called lighting as a service charge for light services on a recurring basis rather than all at once. It is a cost-effective alternative where service providers create long-lasting and efficient lighting systems with monthly payments rather than spending money upfront on a lighting system overhaul. Third-party service providers with the necessary resources, including lighting design, installation, finance, and other services handle these systems. Lighting service vendors retain ownership of the product throughout the subscription term rather than giving it to the customers. As a result, energy use and carbon emissions are reduced. The increasing electricity demand worldwide and growing Adoption of Energy-Efficient Lighting Systems as well as strategic initiatives from leading market players are key factors accelerating the market growth.

Rising global electricity demand due to increasing consumption in residential categories and growing industrialization is contributing towards the growth of the Global Lighting as a Service Market. For instance, according to International Energy Agency (IEA) estimates – in 2020, global residential electricity demand was estimated at 7-thousand-Terawatt hour, and the residential electricity demand is projected to grow to 8-thousand-

Terawatt hour by 2030 and further 11-thousand-Terawatt hour by 2040. Also, the growing integration of the Internet of Things with Lighting Systems and rapid utilization of LED as an energy-efficient lighting technology would create a lucrative growth prospects for the market over the forecast period. However, the lack of penetration of Lighting as a Service stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Lighting as a Service Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the increasing adoption of lighting as a service and the presence of leading lighting as a service vendors in the region. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as the presence of small-and medium-scale organizations, and growing demand for energy-saving lighting solutions in the region.
