Global Limestone Market is valued at approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2022-2029. The major component of limestone-a sedimentary rock-is calcium carbonate in the formation of the mineral calcite. It could also take the form of chemical sedimentary rock that is produced when calcium carbonate from lake or ocean water crystallites. The Limestone market is expanding because of factors such as increasing demand from the construction industry and rising steel production.

The World Steel Association estimates that worldwide steel production increased by 3.7% from 1,880.4 metric tons in 2020 to approximately 1,950.5 metric tons in 2021. This displays the current state of global market demand. However, rising CO2 emission factors from agricultural liming may halt market growth.
