## **Abstracts**

Global Log Splitters Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Log Splitters are parts of machinery used to split large wood chunks into smaller parts of firewood. It can be used by both consumers and companies. A plunger forces the wood towards a moving or stationary separating wedge in a log splitter. The plunger then moves the wood piece through the wedge, to split the wood into two piece. The increasing demand for wood products and growing firewood demand in the colder region are key factors driving the market growth.

The increasing demand for wood products is contributing towards the growth. For instance – as of 2023, revenue in the worldwide furniture market is estimated at USD 770 billion, and the market is expected to grow annually by a CAGR of 5.31% between 2023 and 2027 to reach USD 947.04 billion by end of 2027. Also, the growing emergence of electric log splitters and technological advancement in log splitter would create a lucrative growth prospectus for the market over the forecast period. However, the high cost of Log Splitters stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Log Splitters Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the presence of leading market players and increasing demand for firewood in the region. Whereas Europe is expected
