Abstracts

Global Long-acting Monoclonal Antibodies Market is valued approximately USD xx Billion in 2021 and is anticipated to grow with a healthy growth rate of more than xx % over the forecast period 2022-2028. Long-acting Monoclonal antibodies (mAbs or moAbs) are antibodies created by cloning a single white blood cell. Every subsequent antibody generated in this manner may be traced back to a single parent cell. Monoclonal antibodies can only attach to the same epitope and have monovalent affinity (the part of an antigen that is recognised by the antibody). Growing prevalence of chronic diseases, surfacing sedentary lifestyle and use of MABs in the treatment of Covid-19 has driven the long-acting monoclonal antibodies market. For Instance: Eli Lilly discovers etesevimab, a monoclonal antibody that targets the receptor binding region of the SARS-CoV-2 surface spike protein. Also, on-going advanced research and development is most likely to boost the overall growth of the Global Long-acting Monoclonal Antibodies Market. However, high cost of mAbs can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the Global Long-acting Monoclonal Antibodies Market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World.
