Abstracts

Global Magnetoencephalography Market is valued approximately USD XX million in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. Magnetoencephalography, or MEG, is a medical test that detects the magnetic fields created by the electrical currents in the human brain without having to pierce or cut the human body. This non-invasive medical test is critical in mapping brain activity and pinpointing the specific area of epileptic illness causes. Increased technical advances in magnetoencephalography (MEG) systems, as well as their expanding usage, are expected to boost the market throughout the projected period. Furthermore, market expansion is projected to be fueled by the growing prevalence of neurological diseases that cause mortality and disability throughout the world. Furthermore, neurodegenerative illnesses typically affect people in their middle to late years of life, and the prevalence of these diseases is expected to grow as the population ages. By 2030, one out of every five Americans will be beyond the age of 65, according to the Harvard Neurodiscovery Center. If left untreated, neurodegenerative diseases will affect more than 12 million Americans in the next 30 years. Furthermore, the high cost of brain scanning techniques and the magnetoencephalography scanner is a major restriction on the global market, particularly in developing countries with poor reimbursement systems. Also, the availability of alternative scanners and their growing popularity, such as EEG, is likely to restrain market development over the projection period. Whereas, rising research and development efforts are expected to drive the market for magnetoencephalography scanners throughout the projected period.

The main regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical analysis of the worldwide Magnetoencephalography market. North America dominated the MEG market in 2020. Due to the presence of a big number of market rivals in the region, as well as the high frequency with which new products are released, both appear to be contributing elements to regional market growth. Furthermore, due to growing demand for improved imaging equipment and the rising prevalence of neurological diseases, the market in Asia Pacific is expected to grow at the fastest rate over the projected period.
