Abstracts

Global Malt Extracts and Ingredients Market is valued approximately at USD 17.6 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 3% over the forecast period 2021-2027. Malts are germinated cereal grains that have been soaked in water and then dried and processed. The process is known as malting, and it involves the development of enzymes that allow the grains to be modified into starch and other sugars. Furthermore, these enzymes produce proteases, which break down proteins into forms that may be utilized in fungal development. Malt extracts and ingredients market is driven by increasing demand for natural sweeteners and rising adoption of malt extracts and ingredients in the food & beverage industry. The use of malt in the beer industry is projected to be a key market driver, and the market is rapidly expanding. Another driver for this market's growth is its extensive application in the food industry. The Global Malt and Malt Extracts Public expects the use of various types of malt extracts in food products as a potential. For instance, as per Statista, Beer production in the world reached 1.91 billion hectoliters in 2019, up from 1.3 billion hectoliters in 1998. Beer is a commonly consumed beverage created from the basic elements of water, malt, hops, and yeast. China, the United States, and Brazil are the world's top beer producers. However, quality of barley and seasonal variations and fluctuating beer market may impede market growth over the forecast period of 2021-2027.

Europe is dominating the market as people are becoming more aware of healthy eating habits. The emergence of craft brewers and increased beer consumption are two important reasons driving development in the European region. As a result of these factors, there has been an increase in demand for malt ingredients in the region. Furthermore, the many applications of malts in the food and non-alcoholic beverage sectors are expected to propel the malt extracts and ingredients market further.
