Abstracts

Global Man-portable Military Electronics Market is valued at approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. In the analysis, every piece of technological gear that soldiers on foot can use is taken into account. The study includes all automated devices, excluding man-portable rockets, grenades, and missile launchers, that are installed on troops' helmets and integrated into their body armour. However, the scope also includes the man-portable electronics that make up the launching system's accessories, such as sniper scopes and gun sights. The increasing military spending and territory monitoring by countries throughout the world and Improvements in the field of microelectronics have led to the adoption of Man-portable Military Electronics across the forecast period. For Instance: as per Statista in 2022, with 801 billion dollars allocated to the military in 2021, the United States was the nation with the largest military budget. That accounted for 38% of the 2.1 trillion dollars in overall military spending that year across the globe. In terms of military spending as a percentage of GDP as of 2019, the United States ranked lower than Saudi Arabia, Israel, and Russia at 3.4 percent of the country's gross domestic product (GDP). Also, the partnership with defence industry to create exoskeleton technologies likely to increase the market growth during the forecast period. However, satellite communication in rural places can be expensive and unstable which may impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Man-portable Military Electronics market

study include Asia Pacific, North America, Europe, Latin America and Rest of the World.
