## **Abstracts**

Global Marine Propeller Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Marine Propeller is a rotating fan-like structure that is used to propel the ship by using the power generated and transmitted by the main engine of the ship. Growth in international seaborne trade and increased demand and adoption rate for electric propulsion technology has led to the adoption of Marine Propellers across the forecast period. For Instance: According to the United Nations Conference on Trade and Development (UNCTAD), maritime trade volumes expanded by 0.5 percent in 2019 and reached a total of 11.08 billion tons. Also, with the adoption of environmentally friendly marine propulsion systems, the adoption & demand for Marine Propeller is likely to increase the market growth during the forecast period. However, stringent environmental regulations impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Marine Propeller Market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the up-gradation of dry cargos for real-time data exchange in the U.S. as well as, the high demand for specialized vessels in maritime tourism in Canada. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as increasing demand for corvettes and frigates from emerging economies, such as China and India in the region is responsible for lucrative growth

prospects for the Marine Propeller Market across Asia Pacific region.
