## **Abstracts**

Global Medical Biomimetics Market is valued approximately USD 33.21 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 6.70% over the forecast period 2024-2032. Medical biomimetics combines biology, engineering, and materials science to develop novel approaches to medical problems. Researchers emulate biological processes, structures, and systems to create medical technologies that mimic nature's efficiency and adaptability. Medical biomimetics finds applications in prosthetics, tissue engineering, drug delivery, surgical tools, imaging, and beyond. This interdisciplinary approach promises to revolutionize healthcare by providing safer, more effective, and sustainable treatments and interventions. Moreover, AI is increasingly integrated into the design and development processes of biomimetic medical technologies. Machine learning algorithms are utilized to analyze complex biological systems, model biomimetic structures, optimize material properties, and accelerate the discovery of novel biomimetic solutions.

The increasing incidence of chronic diseases plays a significant role in supporting the growth of the Medical Biomimetics Market. Chronic diseases such as cardiovascular diseases, orthopedic disorders, diabetes, and neurological disorders present complex challenges in terms of treatment and management. Biomimetic materials and devices offer innovative solutions that can mimic natural biological structures and processes, providing more effective treatments for these conditions. Additionally, other factors support the market growth are increasing research and development activities, growing advancement in nanotechnology, rising demand for minimally invasive procedures, and

increasing research and development investments. However, stringent regulatory framework, and high development costs are expected to hinder the market growth during the forecast period 2024-2032.

The key regions considered for the global Medical Biomimetics market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. In 2023, North America was the largest regional market. North America is projected to be the leading region in the Medical Biomimetics market, driven by factors such as an ageing population, rising prevalence of chronic illnesses, and ongoing advancements in biomimetic technology. As per NIH (National Institutes of Health), the number of people in the United States aged 50 years and older will increase by 61.11% from 137.25 million in 2020 to 221.13 million in 2050. Of the population 50 years and older, the number with at least one chronic disease is estimated to increase by 99.5% from 71.522 million in 2020 to 142.66 million by 2050. As a result, the growing old age population and rising prevalence of chronic disease is anticipated to support the market growth.
