Abstracts

Global Medical Decision Support Systems for Sepsis Market is valued approximately at USD 23 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 24.3% over the forecast period 2021-2027. Clinical decision support is a useful tool for providing information to members of the care team, such as physicians, nurses, patients, administrative personnel, and others. The collected healthcare data is filtered or tailored to a specific individual or circumstance. CDSS was created with the goal of improving care quality, preventing adverse occurrences, and assisting care team members in becoming more efficient. The clinical decision support system has become a vital tool for healthcare professionals as the number of available data grows. CDSS is widely utilized in pre-diagnosis, diagnosis, and follow-up because it assists physicians in making important decisions. The market is driven by rise in digital patient data access and increasing funding and research grants. For instance, as per Statista, improved interoperability between systems, according to 58 percent of young healthcare workers in January 2020, would allow for the full use of digital patient data. Furthermore, 57% of respondents said that better data accuracy would allow digital patient data to be completely effective. However, concerns regarding inaccurate and inconsistent data may impede market growth over the forecast period of 2021-2027.

Geographically, North American is dominating the market in terms of market shares followed by Europe and APAC. Also, the region is anticipated to grow at the fastest rate over the forecast period. Factors such as increased attempts to save healthcare costs, federal programmes such as the Hospital Readmissions Reduction Program, and rising investments in HCIT solutions in the region may all be linked to the huge proportion and

rapid growth. Cerner, Epic, and MEDITECH are among the major providers of sepsis CDS modules.
