Abstracts

Global Medical Fluid Bag Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Medical fluid bags are used to assure proper body fluid collection, electrolyte imbalances, blood transfusions, and oral or enteral patient nutrition during fluid replacement therapy. These bags are made up of various polymers and have pockets for retaining body fluids for a range of biomedical operations. One of the primary reasons fueling the global growth of the medical fluid bags market is the rise in occurrences of various chronic disorders such as diabetes, cancer, cardiovascular diseases, kidney, and liver infections. In addition, the increased frequency of gastrointestinal disease, particularly among the elderly, will propel the business forward. Initially, the COVID-19 pandemic had an impact on the medical fluid bag business. The outbreak has had a significant impact on several sectors, resulting in financial hardships, with the healthcare industry being at the forefront. According to the Healthcare Cost and Utilization Project, roughly 17.2 million hospital visits for invasive and therapeutic procedures were reported in ambulatory surgical facilities and hospitals across the United States. According to the National Center for Health Statistics, around 48 million inpatient procedures were performed in the United States in 2010. Medical fluid bags will benefit from the growing number of surgical procedures because they are an important part of surgical basics and are used to drain bodily fluids, provide liquid drugs, nutrients, electrolytes, and blood to the patient. However, complications

associated with the use of PVC-composed medical fluid bags may impede market growth over the forecast period of 2021-2027.

The regional analysis of the Global Medical Fluid Bag Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). North America is the leading region across the world in terms of market share due to rising hospital visits and growing surgical volume in the region. Whereas Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to increasing number of surgical procedures across the region.
