Abstracts

Global Medical Videoscope Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Medical Videoscope is an illuminated optical instrument used to screen and execute diagnostic interventions inside hollow cavities and visceral organs of the body, such as the brain, esophagus, lungs, abdomen, gastrointestinal (GI) tract, and others. Growing aging population, rising prevalence incidence of diseases has led to the adoption of Medical Videoscope across the forecast period. For Instance: as per the United Nations in 2019, there were 703 million persons aged 65 years or over in the global population. This number is projected to double to 1.5 billion in 2050. Globally, the share of the population aged 65 years or over increased from 6 per cent in 1990 to 9 per cent in 2019. Also, with the increased patient preference for minimally invasive surgeries, the adoption & demand for Medical Videoscope is likely to increase the market growth during the forecast period. However, high cost of endoscopic procedures impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Medical Videoscope Market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the leading region across the world in terms of market share owing to the increasing number of endoscopic surgeries; the improving endoscopic infrastructure. Whereas,

Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as rapid rise in the number of elderly people and improving healthcare infrastructure would create lucrative growth prospects for the Medical Videoscope market across Asia-Pacific region.
