Medium chain Triglycerides comprise a glycerol molecule attached to 3 fatty acid chains ranging between 6 to 12 carbons in length. Unlike most other lipid molecules that require a complex process of digestion, MCTs are more easily absorbed into the bloodstream from the gastrointestinal tract. Triglycerides are esters of trihydroxy alcohols with three fatty acid molecules. They are the principal components of oils and fats. Also, they have been used to manage body weight and improve mental function. Medium-chain triglycerides can be taken as an oil, pill, or powder.
