Abstracts

Global Meningococcal Vaccine Market was valued at USD 2.11 Billion in 2019 and expected to grow with a CAGR 9.5% over the forecast period 2020-2027.

Meningococcal Vaccine is used in Invasive meningococcal disease. Invasive meningococcal disease (IMD) is a bacterial virus with a variety of diseases involving meningitis, bacteremia (meningococemia), and bacteremia pneumonia affected by a gram-negative coccus, *Neisseria meningitidis*. The meningococcal disease is rare, if left unchecked, it is associated with a high mortality risk of up to 50% and commonly leads to severe complications afterwards. The disease is usually spread by patients or asymptomatic carriers via close contact with droplets of respiratory or throat secretions. *N. (Neisseria)* Various serotypes of *N. Meningitidis* are found in 12 serogroups, of which only 5 serogroups are responsible for most of diseases worldwide, including A, B, C, W, and Y. Surge in immunization programs across the globe and increase in outbreaks of meningococcal disease drive the market globally. For instance, as per the World Health Organisation, Meningococcal meningitis is observed worldwide but highly sub-Saharan Africa and stretching from Senegal in the west to Ethiopia in the east affected from this diseased, around 30000 cases are still recorded each year in these areas. Furthermore, increase in research and development for vaccine technology also propel market growth. Despite that, longer timelines required for vaccine production and high costs associated with the development of vaccines restraint the market growth over the forecasting period 2020-2027.

The regional analysis of the Meningococcal Vaccine Market is considered for the key

regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. In which, North America and Europe dominate the market owing to surge in outbreaks for meningococcal diseases and awareness for meningococcal diseases, ease of product availability in these regions. However, APAC is registered the fastest growth due to steady meningococcal vaccine market growth in the region.
