Abstracts

Global Menopause Drug Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. (Mar) Menopause Drug is a type of walk-in clinic that provides ambulatory care in a dedicated medical facility outside of a conventional emergency room (ER). Also, the Menopause Drug is used for treating injuries and illness that need immediate care. The increase in percentage of women aged 40-65 years impacted them the most has led the adoption of Menopause Drug across the forecast period. According to a survey conducted in 2021 by Statista, 1 in 6 women aged 40 to 65 claimed hot flashes were the most bothersome symptom of menopause. Another 15% experienced weight increase, with vaginal dryness and uncomfortable sex affecting the majority of women (12%). As of 2021, this statistic shows the percentage of women aged 40 to 65 in the United States who reported that menopause symptoms affected them the most. Also, with the increasing research and development in the drugs, the adoption & demand for Menopause Drug is likely to increase the market growth during the forecast period. However, low awareness regarding this drug impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Menopause Drug Market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the significant region across the world in terms of market share owing to the high prevalence of unhealthy lifestyle and rising introduction of novel drugs in this region. Whereas, Asia-Pacific is anticipated to exhibit highest CAGR over the forecast period 2022-2028.
