Global Metabolomics Market is valued approximately USD 1.9 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 13.4% over the forecast period 2022-2028.

Metabolomics is a scientific study of chemical procedures that includes the small molecule substrates, intermediates and products of cell metabolism, and metabolites such as chromatography, spectroscopy, and multivariate. Metabolites are associated with the phenotype of an organism and utilizes in various applications like phenotyping of genetically modified plants, substantial equivalence testing, biotic-abiotic stress reaction analysis, and identification of gene function. Additionally, it also allows

scientists and researchers to evaluate biological impacts and perceive the adverse reaction of drugs on an organism. The increasing availability of private and government funding for metabolomics research, and growing expenditure on pharmaceutical and biotech R&D activities are the primary factors for the market growth across the globe. The rising demand for personalized medicine, coupled with the increasing number of strategic movements such as mergers & acquisitions, by the leading market players are further surging the global market demand in the approaching years. For instance, in July 2021, the University of California, Davis (UC Davis), and Thermo Fisher Scientific, Inc. introduced the Center of Excellence in Clinical Metabolomics- a research associate to offer best practices, innovations, and standard operating measures to the metabolomics community. However, the complexity and diversity of biological samples and the high cost of tools and instruments impede the growth of the market over the forecast period of 2022-2028. Also, biomarker development and lucrative opportunities for market growth in emerging markets are anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Metabolomics Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing preclinical activities by CROs and pharmaceutical companies, tied with the increasing biomedical research. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as growing demand for improved pharmaceutical products, as well as the growth of the emerging economies, would create lucrative growth prospects for the Metabolomics Market across the Asia-Pacific region.
