Abstracts

Global Metal Cans Market is valued at approximately USD 61.55 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6.2% over the forecast period 2022-2029. Metal cans are referred to as a container that is generally used to store and distribute food, beverages, chemicals, oil, and many other items. Metal cans are portable and simple to stack, which are made up of tin-plated or aluminum, or zinc-plated steel, which are generally used for packaging food, beverages, or other products. The market demand is primarily driven by the factors such as surging demand for aluminum cans, rising preference towards the demand for eco-friendly cans, coupled with growing awareness regarding the benefits associated with metal packaging.

The rising use of packaged and processed foods and beverages is further stipulating the market expansion worldwide. The Statista estimates that 1.35 trillion liters of packaged beverages were consumed worldwide in 2021. Additionally, it is anticipated that by 2024, the amount is likely to rise and reach almost 302.4 billion liters. Therefore, the increased consumption of packaged foods and beverages is exhibiting a favorable impact on market expansion globally. Furthermore, the rise in the number of product innovations, as well as growth prospects in the number of emerging markets are creating various lucrative opportunities for the market over the forecasting years. However, the high usage of bio-based plastic and fluctuating costs of raw materials stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Metal Cans Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the presence of highly developed infrastructure of the packaging industry, along with the rising focus of packaging manufacturers for the development of sustainable packaging solutions. Whereas, the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as growing financial awareness, as well as the growing acceptance of crypto payments among various businesses in the regional market.
