Global Metal Injection Molding Market to reach USD XXX billion by 2025.

Global Metal Injection Molding Market valued approximately USD XXX billion in 2016 is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2017-2025.

The metal injection molding market has been segmented on the basis of material type, end-use industry, and region. On the basis of material type, the market has been segmented into stainless steel, low alloy steel, soft magnetic material, and others (tungsten, tool steel, titanium). The stainless steel segment is estimated to be the fastest-growing material type segment of the metal injection molding market on account of the wide application of stainless steel in various end-use industries. Stainless steel is consumed widely owing to its relatively lower price as compared to other material types. This factor is expected to drive the demand for stainless steel during the forecast period.

On the basis of end-use industry, the metal injection molding market is segmented into electrical & electronics, automotive, industrial, consumer products, medical & orthodontics, and firearms & defense. The electrical & electronics segment is projected to grow at the highest CAGR between 2017 and 2025. This projected high growth is due to the rising demand for miniaturization of electronic devices, which has resulted in the increasing demand for small and complex metal injection molded parts with better performance at a relatively lower cost.

The objective of the study is to define market sizes of different segments & countries in recent years and to forecast the values to the coming eight years.
