Abstracts

Global Metallic Microspheres Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Metallic microspheres are described as solid spherical particles that are used as laser fusion targets, catalysts, and materials to create electrically conductive adhesives and polymers. Metallic microspheres consist of ceramic and glass as ingredients that are gaining huge traction in industries such as automotive, aerospace and defense, construction composites, life science & biotechnology, paints & coatings, and others. The growing demand from existing and other upcoming application areas, better reusability and recyclability properties of metallic microspheres, coupled with the rising initiatives by the leading market players are the primary factors fueling the global market growth. For instance, according to Statista, in 2020, the global automotive manufacturing industry generated a revenue of around USD 2.5 billion and it is projected that the industry reaches nearly 2.8 billion by 2022. Thereby, the growth of the automotive sector is positively stimulating the market growth across the globe. However, volatility in the prices of metals and higher costs incurred during research and development activities impede the growth of the market over the forecast period of 2022-2028. Also, the rising infrastructural development and modernization activities and substantial development of the emerging markets are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Metallic Microspheres Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to rising investments in research and development activities, and the presence of various prominent market players such as Polysciences, Inc., Phosphorex Incorporated, Merit

Medical Systems, Inc., and many others. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the development of the end-use industry, and the growth of countries such as India, and China would create lucrative growth prospects for the Metallic Microspheres Market across the Asia-Pacific region.
