Abstracts

Global Micro mobility Market is valued approximately at USD 59.46 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 17.4% over the forecast period 2023-2030. Micro mobility encompasses a variety of compact and lightweight transportation options designed for short-distance commutes, typically covering distances of up to 10 kilometers. This category includes a diverse range of vehicles like bicycles, e-bikes, electric scooters, electric skateboards, shared bicycles, electric pedal-assisted bicycles, and more. These modes of transportation are characterized by their speed limit of 15 miles per hour (25 km/h) or less. The global micro mobility market is witnessing expansion attributed to the worldwide advancement of smart cities and vehicle infrastructure. Growth is propelled by various factors, including the rising demand for on-demand transportation services, government efforts to promote smart city initiatives, and increased venture capital investments. Also, the preference for carpool and bike pool services among office commuters contributes to the growth of ride-hailing and ride-sharing services.

The growing preference for bicycles as a convenient and affordable mode of transportation for short trips has resulted in an upsurge in the demand for micro mobility solutions. This increased demand for bicycles is a significant factor driving the market growth of micro mobility. According to Statista, the global bicycle sales are anticipated

to experience substantial growth, nearly doubling from 2021 to 2027. With a market value of USD 38.4 billion in 2021, the bicycle industry is expected to continue its upward trajectory, reaching a projected value of USD 73.85 billion by 2027. Additionally, intelligent transportation system and supportive government initiatives for the development of bike-sharing infrastructure are expected to create numerous opportunities for the growth of the global micro mobility market across the globe. However, low internet penetration rate in developing regions stifles the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Micro mobility Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 with largest market share owing to the expanding urban population, presence of key market players and the improved infrastructure of cities, which in turn promotes the use of public transportation. Asia Pacific is expected to fastest growing significantly during the forecast period, owing to increasing demand for vehicles across various sectors, cohesive government initiatives for smart cities, and rising preference for bicycles as a convenient and affordable mode of transportation. Major market player included in this report are:
