Abstracts

Global Microbial Therapeutic market is valued approximately USD 179.28 million in 2019 and is anticipated to grow with a healthy growth rate of more than 8.7 % over the forecast period 2020-2027. A microbe is a microscopic living organism, such as a bacteria, yeast, or fungus. Microbial products are produced by microbes and are mainly utilized for producing cheese, wine , vinegar and bread. Medicinal microbiology includes production of enzymes, antibiotics, nutrients etc. The driving factors for microbial products are increasing prevalence of diseases which has led to the adoption of microbial technology for production of enzymes, vitamins and nutrients. According to the World Health Organization, chronic disease prevalence is slated to increase 57% by 2020-end which is about 44% currently. As the global geriatric population increases, prevalence of conditions such as diabetes, cardiovascular problems, cancers and asthma are bound to rise. So , pharmaceutical companies are accelerating their research to develop effective treatments by using microbial products. However, low quality producers operating from unknown locations impedes the growth of the market over the forecast period of 2020-2027. Also, Opportunity is increasing demand for high quality reagents for producing medicines so the adoption & demand for Microbial Therapeutic Products is likely to increase.

The regional analysis of global Microbial Therapeutic Product is considered for the key

regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. US is the leading/significant region across the world in terms of market share owing to the increasing expenditure on healthcare and per capita consumption of microbial products. Whereas, Europe is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising disposable income and rising consumption patterns would create lucrative growth prospects for the Microbial Therapeutic Products across Europe.
